Edit

GSP 416

Advanced Cartography

Fall 2025

Welcome to Advanced Cart!

Cartography, as you know by now, is both art and science, number crunching and aesthetic design. But at the heart of it all is communication. Maps are the language of spatial data, the way in which we communicate spatial relationships, identify patterns or gaps, explore faraway regions, or just marvel at the beauty of a place. Much like the written word, a map can be austere, scientific, and even a little dull in the way it communicates information, or it can be engaging and ebullient, drawing us in and transporting us to a special place. In this course, we'll move beyond basic structure and grammar and dive deep into mood and audience and using our powers for good.

This course will further explore the art and science of cartography, using a variety of tools. Computers make creating maps easier, but sound cartographic principles must still be applied to achieve meaningful results. Students will learn a variety of cartographic techniques and delivery mechanisms to provide maps for a variety of audiences.

About the Course

Course Details:

- **Name**: GSP 416 Advanced Cartography
- **Term**: Fall 2025
- **Sections**: 43727

Course Format: This 16-week version of GSP 416 is fully in-person, with meeting days and times noted in your student center. All assignments will be submitted in Canvas. **Keep track of due dates in the Canvas Calendar, or by using the To Do list on your Dashboard or course homepage.**

Expected Work Load: The expected workload at Cal Poly Humboldt is calculated at 3 hours per week for each unit in a standard 16-week course. For this 4-unit seminar course, this amounts to 12 additional hours per week, outside of class meeting times. Four hours per week are face-to-face classroom work, and then up to 8 hours completing assignments on your own time. Some weeks, the load may be lighter than others, but you should always plan on setting aside this time.

Credits: 4 units; repeatable for credit

Catalog Description: Build on fundamentals through cartographic visualization: the map as a tool for both exploring and representing geographic information. Greater depth in cartographic design theory. Discuss weekly readings; complete major map project.

Prerequisites: You must successfully complete GSP 316 (Cartography) to take this course. GSP 270 or 272 is recommended, but not required. You should be comfortable with finding, retrieving, and manipulating data to get it into your map.

Course Objectives

After completing this laboratory intensive course, students will possess:

- A thorough knowledge of cartographic theory
- Knowledge of multiple media formats
- The ability to select the most appropriate method for representing spatial data
- Practical experience in constructing a variety of cartographic elements, using GIS and graphic software packages
- Advanced skills in interpreting and communicating spatial information

This course is a requirement for several degree programs, and it contributes to the achievement of Program Learning Outcomes (PLOs) and Institutional Learning Outcomes (ILOs).

Cal Poly Humboldt Learning Outcomes:
https://academicprograms.humboldt.edu/content/student-learning-outcomes (https://academicprograms.humboldt.edu/content/student-learning-outcomes)

Required Materials

Course Text

- **Recommended**: ***Cartography.*** by Kenneth Field. Absolutely not required, but it's a great resource. You'll get some pages from here plus some other resources provided as PDFs in Canvas.

Additional readings may be provided or assigned, in the form of materials available freely online or supplied PDFs.

Course Format

This course is organized into a series of modules, which group together a series of related chapters, activities, assignments, and quizzes. Each module may be accessed from the course home page.

Lab assignments are due typically one week from the lab in which they are assigned. Maps will need to be printed out for critique, so make sure you have funds in your print account (unless we're doing something on the large format printer).

Examinations and assignments are listed in the course outline below, and are **subject to change**. You are responsible for knowing when your work is due – any changes to due dates will be posted on the Canvas calendar and in Announcements. Please see your Canvas calendar and/or the Syllabus link for the most current version.

Technical Requirements

If you wish to use ArcGIS Pro or Illustrator on your own computer, it is your responsibility to make sure it meets requirements. For more information, see the **Software for Home Use (https://hsu-forms.humboldt.edu/software/)** page.

Accessing the Software

This course is taught using Esri's **ArcGIS Pro**. Student versions may be downloaded from the **Software for Home Use (https://hsu-forms.humboldt.edu/software/)** page and selecting **ArcGIS Pro**. License information is contained in the **Installation instructions**.

Please note, **this software is only compatible with the Windows operating system**. If you have a Mac or other non-Windows device, you may access the software from the **Virtual Lab (https://canvas.humboldt.edu/courses/82139/pages/accessing-the-software)**.

Computers on Campus

As an enrolled student, you are welcome to use any of the geospatial computer labs on campus during open lab hours. These labs include Forestry 203 and 204A, and Natural Resources 203. There are also computers on the first floor of the University Library with geospatial software installed. Students may inquire at the Library Help Desk for details on the current status of computers and software.

Courses are also taught in these computer labs, so **please be respectful.** Check the schedule posted on the door before entering. **Do not** interrupt an ongoing class. If you arrive at the start of a class, always ask the instructor permission to use the computers if there is a class in session.

Information on lab locations and availability can be found on the **ITS Computer Labs webpage (https://its.humboldt.edu/classrooms/labs)** .

Course Schedule

The recommended method for navigating this course is via the home page, and then working through each module from top to bottom. Specific due dates are listed with each activity, and can also be found on the Canvas Calendar, your To Do list, and the bottom of this page.

Module 1: Basics Redux

Revisiting the basic foundations and learning to bend the rules

- Working with compound outlines
- Working with type

Module 2: Statistical Cartography

A couple of quick techniques to make your data really shine

- Isopleths (and advanced hexbins)
- Flow maps

Module 3: Mapping for an Audience

Tailoring the map to the audience

- Generalizing to remove extraneous detail
- Creating a call to action with effects

Module 4: Creating Place

Immersing the map reader in the space

- Terrain maps

- Fantasy maps

Module 5: Interactive Maps

Cartographic click bait

- Intro to web/dynamic mapping

Module 6: Professional Preparation

Creating a portfolio to show off your skills

- Print portfolio
- Web portfolio

Your Instructor

Meet the Instructor

Amy E. Rock, Ph.D., GISP
Department of Geography, Environment & Spatial Analysis
Founders Hall 131
amy.rock@humboldt.edu (mailto:amy.rock@humboldt.edu)

Preferred name: Please call me Doc Rock!

Pronouns: she/her

How to reach me: The best way to connect with me is via Slack (DM for personal matters), as I get tons of emails, especially at the start and end of a semester, which might mean that I don't see your message until it's too late.

NOTE: I will read and respond to e-mail and Slack posts at least once per day,

A little more about me

Dr. Amy Rock is a longtime resident of Ohio, and a relatively recent transplant to Northern California, where she teaches geography, GIS and cartography in the Department of Geography, Environment, and Spatial Analysis at Cal Poly Humboldt. She is also the Executive Director of the University Consortium for Geographic Information Science (http://www.ucgis.org), and a member of the editorial board of Cartographic Perspectives (https://cartographicperspectives.org/index.php/journal).

Doc Rock encourages her students to become engaged in their communities and think critically about politics, economic and community development and the role of nonprofit organizations in our society. She

Monday through Friday.

works with nonprofits and community organizations to bring geospatial thinking to contemporary issues. An avid map geek, she shamelessly judges a book (or video game) by its map.

Professional Affiliations

Doc Rock belongs to several cartography-related organizations, many of which have student membership options. These organizations can help you get connected in the professional community, as well as see what cool stuff people are doing. Several have annual conferences with map galleries, and map competitions with cash prizes. Check them out!

Online Etiquette and Course Communication

Both hybrid and online courses at Cal Poly Humboldt will have a high degree of online content and interaction. Cal Poly Humboldt and the instructor of this course are committed to educational access for everyone. This commitment includes creating a welcoming environment for students from all walks of life. Students are expected to maintain a respectful and professional level of discourse when communicating on discussion boards, email, and assignments. Students should also use caution and good judgment when choosing to disclose any personal information with persons they do not know.

All official communications from the instructor are sent via Canvas Announcements to the student's **Cal Poly Humboldt email account**. Be sure to check your @humboldt.edu email account regularly so that you do not miss any critical information.

Canvas Announcements

Class announcements and any changes to the schedule will be sent out via the Canvas Learning Management System. Check your **Canvas Notifications (https://canvas.humboldt.edu/profile/communication)** to ensure you are receiving email notification of new announcements, and make sure you are checking your Humboldt email, as messages will be sent there.

Using Zoom

From time to time, we may use Zoom for group sessions, or some of your instructors may use it for help sessions/office hours. If you've never used Zoom before, it might be a little confusing at first. Here's a short video on how to use it from your phone or computer, from Prof. Arroyo in ESM. **https://youtu.be/gvf0-Z5QHE4 (https://youtu.be/gvf0-Z5QHE4)**

(https://youtu.be/gvf0-Z5QHE4)

Some pro tips:

1. Always make sure you're dressed. Even if your camera is off, malfunctions happen, and we don't want things to get awkward.

2. If you are sharing your screen (e.g. to get help with something), remember that your other tabs will be visible. Close anything you don't want to share with your instructor and the class before sharing.

3. If you're in a group chat, mute your mic when you're not speaking to minimize background noise for everyone.

4. Feel free to use the reactions or text chat to interact with the session, particularly if you're not comfortable with speaking to the group.

5. **Add a profile picture (https://support.zoom.us/hc/en-us/articles/201363203-Customizing-your-profile#:~:text=Profile%20settings,or%20upload%20a%20new%20one.)**, especially if you plan to keep your camera off - it helps your instructors get to know you, and it's weird for us to talk to a list of names on a screen. (If it keeps disappearing, make sure you sign into Zoom before entering a meeting.)

Using Slack

If you have a question about an assignment or course concept outside of class, you should post it to the **appropriate Slack channel (http://hsucartography.slack.com)**. This is visible to all course participants, and your peers may be able to answer your questions more promptly, particularly during evenings and weekends. Responses will also be visible to the group, so questions need only be

answered once. Be sure to skim through previous posts before adding a new question (or use the Search tool), to see if it's already been answered. Please do not wait until the night before something is due if you are struggling with concepts or skills. This information is cumulative, and your future success depends on your current comprehension. If you have a question about grades or a personal matter, do not post it to the forum - email me directly, or make an appointment.

The Slack invite link will be posted early in Announcements, and once you've joined, you can access it directly from the **Get Help** link on the homepage. Communication in Slack, while less formal, should still adhere to online etiquette guidelines.

How to Write an Email to Your Professor

Adapted from **San Jose State Writing Center (http://www.sjsu.edu/writingcenter)**

Email etiquette is important in a college setting because email is often the main mode of communication between students and professors. Students may have trouble communicating in the classroom if the class is large, and students may be unable to visit professors during their office hours. Before emailing, consult this syllabus, the Canvas Calendar, and the assignment details, and if it's a question related to the assignment, ask it on Slack.

Any email to your professor should be professional and brief.

- Identify yourself by including your full name, course number, and section number.
- Put the subject of your email in the subject line (Project Proposal).
- Use a standard font and size, such as Times New Roman, size 12.
- Keep the email brief; aim for a paragraph or a single screen of information.
- Use complete sentences and proper grammar.

Please take the time to read the following article to understand what is and what is not appropriate:

- **Advice for students so they don't sound silly in emails (https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=4&ved=0ahUKEwiTtPWskY_PAhXHSSYKHQsHDu8QFggtMAI students-so-they-dont-sound-silly-emails-essay&usg=AFQjCNFL3S-2NWohCiwEjgZCZHxCNPm-vA&sig2=BfUpwVOHACpSv2P6byKKFA&bvm=bv.132479545,d.eWE&cad=rja)**

Online Communication and Etiquette Expectations

The following are the guidelines modeled after the Cal Poly Humboldt **Online Communication and Etiquette Expectations (https://docs.google.com/document/d/1RpfP_yY44wGDoDVsEaawduu8rP39UEqj7IoCeZcPx6c/edit)**.

Be Professional, Clear and Respectful

Clean and efficient writing translates into clear and useful communication. Writing the way you would speak is a good rule of thumb. Use a positive tone and adhere to the same rules you would follow in face-to-face communications. Use proper grammar, spelling, and formatting - checking all communications before sending. Check messages and respond in a prompt manner.

Your professional image is an important part of credibility and all of your communications will factor into the big picture.

Read and Formulate Communications Carefully

Take the time to think about the information contained in all of your online communications. This time will allow you to consider all points thoughtfully, reduces confusion and prepares you for a valid response. You can in return, research your facts and provide citations for information stated within your communications. This practice promotes a robust academic environment and adds credibility to any course. Re-read all communications before sending to avoid emotional statements and or "all capital letter" text and keep communications meaningful and to the point.

Be Tolerant and Cooperative

Bear in mind that every student is participating in learning. Anyone can make a simple mistake in research, knowledge or communication. Address the idea/concept, not the person. Keep an open mind and focus on the task at hand - *learning*. When adverse conditions arise, and communications get strained - try to help rather than hinder. Real cooperation means working together to the same end - everyone wants to be successful in any given course.

Keep it PG-13 and Confidential

Unless the subject matter calls for the use of topics/language that would otherwise override this tip, all online communications should be transmitted with the intent to inform, inspire, etc. - not to offend or breach personal privacy. Keeping your content PG-13 and confidential will ensure that this is the case. Never use private information about other individuals and be sensitive to the information you share about yourself. Avoid the use of slang, jargon or sarcasm - as they can confuse your recipient.

Remember This Course is Hybrid or Online

If you are taking an online course, your instructor and fellow students may be located around the world or have very different schedules than you do. If you are taking a hybrid course, there may be times when you are required to complete activities outside of class. You may not always receive an immediate response, especially on weekends. Make sure you plan for this and don’t put things off until the last moment.

Use Proper Headings and Subject Lines

Emails and Discussion Forum topics should have subject lines that reflect the content of your message. “My Week 1 Reflections” is better than “submission” and “Week 3 Reading is Missing” is

better than “Help!”

Provide context for your responses. If you are sending a reply to a message or a posting, be sure you summarize the original at the top of the message. Include just enough text of the original to give a context. This practice will make sure readers understand when they start to read your response. Giving context helps everyone.

Provide Enough Detail in Your Messages

When asking for help, either from your instructor or technical support, be sure to provide as much information as possible to help resolve the issue. Make sure to include the course name and activity name, what you were attempting to do, the full text of error messages and your browser/version information (if a technical issue), a screenshot displaying the problem, and any other relevant information. It may take a little more time up-front to compose your question, but it can help to eliminate some of the back and forth communication.

Getting Help

> The instructors will address questions on Slack **Monday through Friday**, at least once per day.

Planning and designing maps is a complicated and iterative process, and it's expected that you will have questions or want feedback. It's important to try to solve basic issues yourself, but if you are struggling, please reach out for help. As we progress in the course, you'll be working on a range of different data sets, with different challenges and issues. Understanding where to post questions or look for existing answers is important, and Google is your friend. The use of internet resources is common practice in industry, and you are expected to become familiar with how to research answers and sort out good advice from bad. Your instructor is still here to help you, but as you work toward becoming a professional, you will need to be familiar with how to access are range of resources.

Typically, there are two ways to obtain answers to questions within the course itself:

Email

It may be tempting to send your instructor an email as soon as you have questions. However, this is not always appropriate. If an issue is related to a **personal or confidential matter**, such as grades, emailing the instructor using your **Humboldt email** is appropriate. If the question is **not confidential**, you should should use the **Slack workspace** to research and post new questions.

> Students who consistently ask general questions using email, and not the Slack forums, will be gently reminded to do so by the instructor.

Slack Workspace

If the question is **general or related to the course content**, such as assignments, quizzes, class schedule, etc., students are required to use the Slack workspace to post questions, rather than emailing the instructor directly. This step is the equivalent of raising your hand in the face-to-face class. It will save time, and every student in the course will have a chance to hear both the question and answer.

Technology Support

For assistance with software installation, passwords, or other technology issues, contact Information Technology Services.

- For self help, see **Top Technology Help Desk Issues (https://its.humboldt.edu/help/top-help-desk-issues)**
- Call: 707-826-4357
- Stop by: Help Desk on the Library first floor near the Learning Center
- **Submit a help ticket (https://hsu-forms.humboldt.edu/techhelp)**

Evaluation and Grading

This course is optional grade mode – it may be taken for a letter grade or as credit/no-credit (CR/NC). Students must select the grade mode in their student center by the deadline indicated on the **academic calendar (https://www.humboldt.edu/events/academic-deadlines)**. To count towards fulfilling major requirements, this course must be taken for a letter grade. Before choosing CR/NC mode, students are advised to review CR/NC and grade mode information at the **registrar's website (https://registrar.humboldt.edu/grades)** or university catalog.

Your grade is composed of lab exercises (60%), a final portfolio (20%), and class participation/professionalism (20%). All grades will be posted in Canvas, and feedback provided by way of rubrics and comments. Please view the feedback on each assignment, as it is designed to help you improve your work on the next item. Assignments will be graded typically within

Grading scale

Grade	Range
A	93% to 100%
A-	90% to < 93%
B+	87% to < 90%
B	83% to < 87%
B-	80% to < 83%
C+	77% to < 80%
C	73% to < 77%

one week of submission, depending on instructor workload. You will be able to track your grade throughout the course via the Grades section in Canvas.

While the participation component is not large, it can bring a borderline grade to the positive side. Participation does not mean you have to be perky and say something every day, but rather thoughtful and measured contribution to critiques, and helpful support of your peers. I'm an introvert, and I get that not everyone wants to respond to every question, but there are multiple ways to demonstrate that you are engaged with the material and supporting your classmates.

All assignments are listed in Canvas, and in the course outline in the **Syllabus (https://canvas.humboldt.edu/courses/82139/assignments/syllabus)** , and are subject to change. Changes will be announced via Canvas announcements, and updated in the individual assignment and Canvas calendar – due dates in Canvas should be considered the most current. There are multiple ways to track upcoming assignments in Canvas, and you are responsible for knowing when your work is due.

Late Policy

Each activity is meant to build on the one before, so it's important to stay on track with your submissions. Late submissions will automatically be assigned a 0 in Canvas, as a reminder to you. Once they are submitted and graded, a 20% per day late penalty is assessed. However, I do understand that sometimes life happens and derails things. For big stuff, make sure to communicate with me as soon as you can (I don't need every

Grade	Range
C-	70% to < 73%
D+	67% to < 70%
D	63% to < 67%
D-	60% to < 63%
F	0% to < 60%

detail, just the basics), and it may be possible to be flexible. Be sure to check the Canvas calendar or the bottom of the **Syllabus (https://canvas.humboldt.edu/courses/82139/assignments/syllabus)** page for due dates. Canvas also has options for **setting reminders (https://community.canvaslms.com/docs/DOC-9605-59346560959)** for your to-do list.

Late work will be penalized 20% per day. Exams and in-class interactive activities may not be submitted late or made up without an excused absence.

If you experience computer issues, or an internet or power outage while working from home, you should come to campus or seek other alternatives such as a local library to complete your work. Technical difficulties do not constitute an exception to late penalties. In the case of a campus or other widespread outage, deadlines will be adjusted.

Exceptions to this policy will only be granted in the event of legitimate excused absences (see Course Policies below for more information on exceptions for military personnel). An excused absence means that you have a) notified your instructor in advance *and received confirmation from them that your notice has been accepted* or b) provided a written medical excuse, court summons, deployment notice, etc. You must still make arrangements to take the test, and our willingness to be flexible improves with the amount of advance notice we receive. **Plan your travel and personal events around your school work**, not vice versa. Failure to be aware of exam dates because of class absence does not constitute an excuse – any changes will be posted on Canvas.

Incompletes

An authorized Incomplete indicates that a portion of required coursework has not been completed and evaluated in the prescribed time period due to unforeseen, but fully justified, reasons and that there is still a possibility of earning credit (Office of the Registrar). Incompletes are not a "fail-safe" for students who have neglected to submit sufficient work to pass the course. An incomplete will not be considered for students who have not completed a significant portion of the work up to the time of the circumstances justifying the incomplete. It is the responsibility of the student to bring pertinent information to the attention of the instructor, and to discuss with the instructor the terms of the incomplete contract.

Policy on Generative AI

Generative artificial intelligence (AI) programs, such as ChatGPT, may be used in this course to brainstorm or learn more about a topic, revise your work, draft an outline or organize thoughts, check grammar, or improve writing style with appropriate citation complying with Humboldt's Student Academic Honesty Procedure. You are responsible for fact checking statements composed by generative AI models and respecting intellectual property (sometimes it's just plain wrong!). Generative AI may not be used for composing discussion posts or completing assignments, writing papers/reports or portions of papers/reports for class assignments. If you are uncertain about the appropriate use of generative AI in this course, you are encouraged to contact your instructor for clarification. Inappropriate use of generative AI programs is not permitted and will be treated as plagiarism as defined in Humboldt's Student Academic Honesty Procedure and handled in accordance with the Procedure.

Meeting Minimum Requirements

Life gets busy, and there will be times where you have a lot going on. It may be tempting to submit assignments that do not meet the minimum word count, or present work that barely addresses the requirements. By not meeting the requirements, or by skimming the bottom edge of the word count, you risk losing points, including possibly receiving a 0 for a sloppy or wholly inadequate submission. Sometimes you may decide to make that call, as you balance priorities. However, in general, **it's best to fully articulate your ideas and arguments** and create a significant safety margin for word counts and timely submission.

Meeting Minimum Word Count Requirements

Most assignments will require a minimum amount of work to receive a grade. For example, a writing assignment may require a minimum length of 500 to 600 words. Students that only submit the minimum amount of work (just over 500 words in this example) should expect to receive at most a **C** grade. To receive an **A**, students should submit exemplary work that exceeds the minimum requirements by a significant amount. The **main body text** of the document determines the word count calculation. Extra elements, such as a title page, name, date, headers, footers, a table of

contents, bibliography, etc., **do not count** towards the final word count calculation. The instructor will make the final determination when calculating the word count for writing assignment submissions.

Writing assignments that fall well below the minimum word count will receive a **grade of 0**.

If you're stuck on how to elaborate without generating word salad, think about explaining your discussion post or lab report to a friend. What questions would they have? In the case of the lab report, can they reproduce what you did (assuming knowledge of the software), or do they need more details? Do the results make sense, or is more description required? While the work you submit must be your own, it's absolutely okay to talk things through with a peer and make sure your map/report/discussion post says what you think it does.

Course Policies

Attendance Policy and Student Expectations

Your attentive presence is expected at all class sessions (for in-person sections), as is participation in class discussions and activities. The collaborative nature of critiques and other aspects of the course are hard to capture without being here. If you are unable to attend class, it is your responsibility to get the information covered in class. Regular patterns of absence will also adversely impact your performance in other areas, so come to class and learn stuff! (In an online course, this equates to watching the lectures regularly.)

Discussions in class and online are meant to enrich the knowledge of us all, and you are encouraged to ask questions, and share your perspectives and experiences. Disruptive behavior will not be tolerated. You are expected to be respectful to your instructor and your fellow classmates, in both active discussion and general demeanor. Phones, mp3 players and other distractions should be turned off and out of sight during class, except as needed for quizzes. Laptops and tablets may be used for notetaking, so long as their use is not distracting. If you are arriving late or need to leave early, please do us the courtesy of informing your instructor in advance, sit near the door and be respectful of others as you arrive/depart.

Please also avoid wearing/smelling of strong scents, as these can induce migraines in those of us who are susceptible. Perfumes, body spray, tobacco and alternatives, and even fabric softener can be overwhelming to those around you.

Academic Integrity

As noted elsewhere, cartography is a collaborative endeavor, and it is expected that you and your peers will solicit and provide advice and critique. You are still responsible for completing and submitting your own work, and work which draws heavily from the work of another without adequate citation may be considered plagiarism. This course follows the Cal Poly Humboldt guidelines for

academic integrity. Students are responsible for knowing the policy regarding academic honesty: **Academic Honesty Policy (http://humboldt.edu/studentrights/academic-honesty)** .

Academic dishonesty is a severe breach of trust upon which the success of this course depends. As such, this course maintains a **zero tolerance** policy for any violations of academic integrity. Students who violate Humboldt State University's academic honesty policy will receive a failing grade in the course and may be held in violation of the University's code of conduct.

Students with Disabilities

We are dedicated to helping accommodate students with disabilities, and I have designed this course with ADA compliance in mind. If there are additional disability-related accommodations needed, students should contact the Student Disability Resource Center in House 71, 826-4678 (voice) or 826-5392 (TDD). Some accommodations may take up to several weeks to arrange. **Student Disability Resource Center Website (http://www.humboldt.edu/disability)** . Please bring us your accommodation letter as soon as possible, so that we know how to meet your needs.

SDRC's Complete Policies and Procedures (http://disability.humboldt.edu/sites/default/files/disability/Documents/PDF_Documents/Policies%20and%2 (http://www.humboldt.edu/policy/PEMP02-01Humboldt-State-University-Policy-and-Procedures-Accommodating-Individuals-Disabilities)

Related Policies and Procedures:

Student Records and Confidentiality (http://disability.humboldt.edu/studentservices-confidentiality)

Disability Determination (http://disability.humboldt.edu/policiesandprocedures-disabilitydetermination)

Appeal Accommodations Decisions (http://disability.humboldt.edu/policiesandprocedures-appeal)

Service Dog Policy (http://disability.humboldt.edu/policiesandprocedures-servicedog)

A complete list of services available to support your academic success and well-being are available here: **https://acac.humboldt.edu/students/campus-student-support-services (https://acac.humboldt.edu/students/campus-student-support-services)**

Names and Genders

The roster of students enrolled in this course are provided by the Office of the Registrar and include your name as it appears on your official Cal Poly Humboldt student file. This name, however, may not be the name by which you want to be addressed. Please advise the instructor of your preferred name or gender pronoun, as early in the semester as possible so that changes made be made to the class records, and I can call you by the right name!

You'll find more background information and answers to frequently asked questions on the **Preferred Names & Pronouns (https://its.humboldt.edu/accounts-passwords/preferred-names)** page on the ITS website.

Military Personnel

Veterans and currently serving military personnel and spouses with unique circumstances (upcoming deployments, drill/duty requirements, disabilities, VA appointments, etc.) are welcome and encouraged to communicate these, in advance if possible, to the instructor in the case that special arrangements need to be made.

Inclement Weather

In case of weather-related delays at the University, online portions of this course will proceed as planned. Your instructor will inform you if there are any extenuating circumstances regarding content or activity due dates in the course due to weather delays. If you are affected by a weather-related emergency, please contact your instructor at the earliest possible time to make special arrangements.

Additional Policies

Additional policy information is listed on the **Syllabus Addendum (https://www.humboldt.edu/academic-programs/syllabus-addendum)** page.

Course Copyright

All course materials students receive, or to which students have online access, are protected by copyright laws. Students may use course materials and make copies for their use as needed, but unauthorized distribution and uploading of materials without the instructor's express permission is strictly prohibited.

Students who engage in the unauthorized distribution of copyrighted materials may be held in violation of the University's Code of Conduct, and liable under Federal and State laws.

Disclaimer

Websites and other links may occasionally become unavailable, as is the fluid nature of the internet. While you should advise the instructor (by posting on Slack), it's in your best interest to search for alternate resources, should a link be broken, so that your progress is not delayed.

This syllabus is subject to change at any time, and you will be responsible for abiding by any such changes. Significant changes to the syllabus will be communicated to you via Canvas announcements.
